

ANALOMIA™

Microbiome Face Cream

MICROBIOME FACE CREAM

A proprietary formula that protects and supports your microbiome, while actively de-aging the appearance of your skin. Think of it as an access portal to perpetual youth.

The youthful appearance of the skin comes from the adequate hydration and nutrition provided by the Analomia ingredients.

Analomia's A15 for Young Skin is a scientific formula containing carefully curated ingredients that enhance your microbiome to visibly de-age your skin:

A15 MICROBIOME

PREBIOTICS
PROBIOTICS
POSTBIOTICS

RED AND
BROWN ALGAE

FRUIT AND SEED
STEM-CELL
EXTRACT

PEPTIDES

RETINOL

HYALURONIC
ACID

HYDROLYZED
COLLAGEN

VITAMIN C

NIACINAMIDE

PANTHENOL

VITAMIN E

ALOE VERA

CAFFEINE

GREEN TEA

PULLULAN

WHAT IS YOUR MICROBIOME?

Your MICROBIOME is a genetic universe made up of trillions of living microorganisms that live inside your body and on your skin (MICROBIOTA).

Shorter and avalanche of new scientific discoveries have proven that your microbiome is the #1 factor for young and healthy looking skin.

When your MICROBIOME is in balance, it does two things:

- Optimizes your skin barrier to protect the perfect original skin you were born with.
 - Acts as an anti-aging agent for your skin.
-

It does this by:

1. Activating your skin's immune system
 2. Limiting the entry of allergens
 3. Protecting from harmful environmental elements
 4. Minimizing oxidative damage
 5. Reducing inflammation
 6. Improving moisture absorption
 7. Optimizing the utilization of nutrients
 8. Promoting self-repair and cell regeneration
-

There are 10 times more cells in your microbiome than in your own body. There is 100 times more genetic material in your microbiome than in your own body. Nothing has a greater impact on the health of your skin.

CERTIFICATIONS

Analyzed and proven ingredients that nourish and keep your skin's MICROBIOME healthy.

The formula contains 15 precisely quantified and compounded active ingredients that nourish and protect your MICROBIOME for visibly younger skin.

The formula meets the most stringent dermatological standards to ensure that it does not irritate or damage your skin.

The formula's ingredients are of 100% natural origin.

The formula is scientifically developed to offer next generation, intelligent protection and nourishment of your skin's MICROBIOME.

This guarantees that the product and its ingredients have not been tested or analyzed on animals.

The formula contains active extracts of Red and Brown Algae, which contain antioxidants, amino acids, and minerals that reinforce the elasticity and softness of your skin, while nourishing it.

The formula does not contain any Parabens which are chemicals that alter the delicate balance of your MICROBIOME, accelerating the premature aging of your skin.

The formula contains nutrient-rich apple and argania stem cell extracts.

The formula does not contain Formaldehyde which is a chemical compound that can be carcinogenic and can negatively affect your MICROBIOME.

The formula does not contain Phthalates which is a chemical compound that can negatively affect your reproductive and endocrine health.

The formula does not contain Mineral Oil and Petroleum which are two petroleum by-products that contain tar and prevent the skin from perspiring naturally to cause allergies and acne.

Premium Quality Endorsed by the Anomia Scientific Advisory Board.

The product complies with Current Good Manufacturing Practice, which is the highest certification for the manufacturing, processing, and packaging of cosmetics.

HOW TO USE YOUR MICROBIOME FACE CREAM

STEP 1: CLEANSE

The first step of any skincare routine is to clear away impurities and excess oils. These substances can clog pores and prevent ingredients from absorbing properly into the skin.

BUT: you should always maintain your microbiome's balance, which means cleansing it without damaging or disrupting its ecosystem of trillions of living organisms.

To achieve this, you should use a gentle cleanser that does not contain any harsh substances.

Pro-Tip: A dry, squeaky-clean feeling after cleansing your skin could be a sign that you've over-cleansed or that the cleanser you are using is too harsh.

STEP 2: APPLY

Face cream should be applied at least twice a day - every morning and every night - even if you don't apply any make-up.

Pro-Tip: Most experts recommend applying moisturizer when your skin is still damp. It allows the cream to absorb more easily and locks in moisture better. So, apply your Analomia Microbiome Face Cream before your skin dries completely after cleansing, or spritz on a bit of face mist before moisturizing.

1. Wash your hands before applying. Dirty hands could cause dirt and bacteria to end up in your cream and on your skin.
2. Scoop out a small amount (between a pea- and cashew-sized amount) of your cream using the applicator. This helps to prevent contamination of the cream.

Pro-Tip: Your skin should be able to absorb the cream rather than feel sticky after application. Start by applying small quantities of the cream and increase until you have determined the correct amount for your skin.

3. Blot small dots of the cream onto your forehead, cheeks, chin, and neck to ensure the best distribution.
4. Use gentle and small upward, circular movements to lightly massage the cream into your face and avoid pulling downward on the skin. You do not need to rub too hard or work the product too vigorously as it will be absorbed by your skin.

Pro-Tip: Focus on the driest areas of your skin. This will vary from person to person. To figure out which areas are the driest, blot your skin with a tissue before cleansing. Other signs of dryness include skin that feels tight, rough, or scaly.

Pro-Tip: Don't ignore your neck. Its skin is delicate and tends to age the fastest.

Notes on the best application technique:

You should not rub really firmly or aggressively, vigorous rubbing could cause an inflammatory response which aggravates conditions like rosacea and cystic acne, and could cause premature aging of the skin. If your skin is tired and you're looking for a glow, rubbing may work, but do not do it frequently.

Gentle pressure in circular motion helps topical creams absorb and stimulate lymphatic circulation. It clears toxins faster which is beneficial for the skin cells, but not recommended for skin prone to redness or rosacea.

The delicate areas around the eyes should not be rubbed, that causes the skin to darken and swell, leading to under-eye shadows and bagging. Instead, the cream should be gently patted into this area.

If your skin is more sensitive and already prone to redness, you should use the patting technique over the entire area.

STEP 3: WAIT

Face cream takes time to absorb and the dryer your skin is the more time will be required.

We suggest you wait at least 3 to 5 minutes before putting on make-up or getting dressed to ensure that you don't rub off the cream before it is absorbed.

Pro-Tip: Use the time it takes for your cream to absorb to brush your teeth, select your outfit, or moisturize your body!
